

Executive Summary

We identified a broad landscape of AI-driven productivity apps. **Top competitors** include Reclaim.ai, Trevor AI, Motion, Todoist (Smart Schedule), Sunsama, Akiflow, Morgen, TimeHero, and (formerly) Clockwise. These tools use AI to automate task scheduling, time-blocking, and focus management. Each offers unique combinations of features: for example, Reclaim.ai defends focus time and schedules tasks and breaks with AI [8†L142-L150] [13†L187-L196], while Trevor AI predicts task durations and provides an “Ask Trevor” AI chat interface for scheduling [2†L89-L98] [2†L139-L148]. **Secondary competitors** include email-based schedulers (Lindy, Scheduler.ai), meeting schedulers (Calendly), and focus/habit apps (Fabulous, Forest, Focus@Will) that serve adjacent needs.

Our analysis (see **Competitor Profiles** below and the **Competitive Matrix** table) shows most solutions excel at either calendar/task integration or focus protection, but **few combine scheduling, focus timers, and habit formation in one app**. Users report pain points around overly complex feature-bloat and poor integration [73†L1-L9] [71†L59-L62]. Notable gaps include: simpler UIs (vs. bloat), tighter linking of tasks-to-calendar, built-in focus modes/timers, and habit tracking. Pricing varies widely (from free tiers to \$20–30+/user-mo) [41†L25-L33] [46†L62-L70], suggesting opportunities for flexible, freemium models.

Recommendations: Our app should offer a streamlined all-in-one planner with AI task-to-calendar scheduling, Pomodoro focus mode, and habit reminders. Key MVP features include smart time-block scheduling, calendar/task integrations, a focus timer, and AI assistance. The **MVP roadmap** (below) prioritizes core scheduling and calendar sync first, then AI-enhanced planning, and finally focus/habit tools. We suggest a tech stack leveraging React (web), React Native (mobile), a Node.js/Python backend with GPT-4 or a fine-tuned LLM for AI planning, and integrations (Google/Outlook Calendar, Todoist/Asana API). See the **Feature & Roadmap** section for details.

Top Competitors

Reclaim.ai

Reclaim.ai is an AI calendar assistant (acquired by Dropbox) that *automatically schedules tasks, habits, breaks, and meetings* into your Google or Outlook calendars [13†L175-L184] [8†L142-L150]. Its AI “Focus Time” feature reserves uninterrupted work blocks and reschedules conflicting events to meet deadlines [8†L142-L150] [56†L391-L400]. It integrates with Slack, Asana, ClickUp, Todoist, Jira, Linear and more [8†L165-L167] [13†L187-L196], and includes chat-based AI assistance. Reclaim offers a free basic plan (as a Google add-on) and paid tiers (≈\$10–\$15/user-mo) [7†L278-L287] [13†L224-L233]. It targets busy professionals and teams. Users praise its focus-time protection and interface (rated ~4.8/5 on G2 [13†L95-L103]), though some note sync delays or confusion with personal-hours settings [11†L375-L382].

Trevor AI

Trevor AI is a web-based personal planner that unifies tasks and calendars with AI scheduling [2†L7-L15] [77†L99-L107] . It *predicts task durations and suggests optimal time slots*, letting users drag-and-drop or use one-click “Plan My Day” to fill their calendar [2†L89-L98] [2†L105-L113] . Its **Focus Mode** locks in one task at a time with a timer and note field, and its “Ask Trevor” chat can create or reschedule tasks using AI [2†L122-L131] [2†L139-L148] . Trevor integrates Todoist, Google Calendar/Outlook, Google Tasks, and Microsoft To Do [2†L7-L15] . A free personal plan is available and Pro costs ~\$5/user·mo [4†L292-L300] . Targeting individuals and small teams, Trevor’s strengths are its simplicity and AI coach features; its weakness is the absence of native mobile apps (it is browser-based). Reviews (e.g. Product Hunt 4.7/5) highlight its ease of use in organizing tasks [77†L99-L107] [11†L375-L382] .

[59†embed_image] *Figure: Motion’s AI scheduling interface (image: Motion app).*

Motion

Motion is an AI-powered **workday planner and calendar**. It automatically pulls in tasks and deadlines and *dynamically time-blocks* them into your calendar, re-optimizing on the fly [22†L1-L4] [60†L66-L74] . The interface combines a task list, calendar view, and an AI chatbot (“AI executive assistant”) for meeting notes and summaries [22†L1-L4] [21†L379-L387] . Motion supports Google, Outlook, iCloud calendars [21†L405-L413] and offers cross-device syncing (though the mobile app is just a companion to the desktop experience) [60†L74-L80] . It uses a paid subscription model (reviewers note it “requires a Motion subscription” [60†L74-L80]). Its strength is comprehensive automation: Motion’s algorithm “always tells you the best task to work on” [21†L379-L387] . A weakness is its learning curve and subscription cost. Users rate Motion ~4.1/5 on iOS (1.9K reviews) [60†L89-L94] . Motion suits professionals who want hands-off scheduling.

Todoist (Smart Schedule)

Todoist is a leading to-do list app (30M users [35†L9-L11]). It offers calendar integration and time-blocking: tasks with dates can appear in a calendar view, and users can drag tasks to set start/end times [32†L212-L220] . Its new AI feature, *Smart Schedule*, uses machine learning to suggest rescheduling for overdue tasks [34†L75-L83] . Core strengths are its reliability, simplicity, and huge ecosystem (integrations with Google Calendar, Slack, Alexa, etc.). Weaknesses: its focus is on tasks rather than full schedule automation, so its AI scheduling is limited to existing tasks (not proactive time-blocking). Todoist has free and Premium plans (\$4+/mo [35†L9-L11]). It’s highly rated (~4.8/5 on App Stores [35†L0-L3]).

Sunsama

Sunsama is a guided daily planner that emphasizes *rituals* and mindfulness. Its AI assistant (“Sunny”) auto-tags tasks and estimates durations based on your history [26†L35-L44] . Users pull in tasks from Asana, Jira, Trello, Notion, etc., and then time-block them into the Sunsama calendar. Sunsama enforces a structured “morning planning” routine and includes a Focus Mode and break reminders [26†L35-L44] [27†L195-L203] . It runs on Web, Mac/Windows, iOS/Android [26†L80-L88] . Pricing is high (\$25/user·mo, or \$20 annual) with only a free 2-week trial [30†L317-L325] . It targets knowledge workers who want regimented planning; strengths are its UX and integrations. Weaknesses include cost and no free tier. User reviews cite its helpful daily structure, though some find it too rigid or expensive.

Akiflow

Akiflow is an **all-in-one planner** that unifies email, tasks, and calendars. Its “Aki” AI assistant responds to natural language (“Ask Aki anything”) and integrates inputs from Gmail, Slack, Asana, etc. The calendar view shows tasks and meetings together, and Akiflow can auto-schedule meetings and tasks. It supports Google and Outlook calendars and has Zapier integrations 【41†L25-L33】 【41†L165-L174】 . Pricing is \$34/user-mo (monthly) or \$19/user-mo (annual) 【41†L25-L33】 【41†L77-L85】 . Akiflow's strengths include unlimited integrations and AI-driven commands. Weaknesses: it's relatively costly and geared to power users. Capterra/GetApp users rate it ~4.7/5 【37†L51-L56】 . It's aimed at professionals (C-levels, teams) wanting a unified AI assistant for scheduling.

Morgen

Morgen is a cross-platform AI calendar and planner (Windows, Mac, Linux, iOS, Android) that **consolidates multiple calendars and task lists**. Its AI Planner (“Kai” assistant) can auto-generate daily schedules and adjust them when priorities change 【43†L75-L83】 【43†L97-L105】 . Users import tasks from Todoist, Notion, ClickUp, Linear, etc., and Morgen will suggest time-blocks to tackle the highest-priority items 【43†L65-L73】 【43†L75-L83】 . It offers built-in scheduling links and buffer time. Morgen has a 14-day trial; pricing is ~\$30/user-mo (\$15 annual) for individuals and \$25/\$10 for teams 【46†L62-L70】 【46†L100-L109】 . Strengths: wide integration and unified view (248k+ users 【46†L47-L55】). Weaknesses: relatively new platform. Product Hunt shows 4.8/5 and users praise its all-in-one calendar 【46†L184-L193】 .

TimeHero

TimeHero is an AI task and project scheduler. It automatically places tasks into free calendar slots and re-plans when things change 【48†L82-L90】 . Geared toward teams, it offers projects, recurring tasks, and integrates with Google/Outlook calendars, Slack, Gmail, and 1,000+ apps via Zapier 【48†L82-L90】 【48†L124-L132】 . Pricing is tiered (Basic \$5, Pro \$12, Premium \$27 per user-mo 【51†L53-L62】 【51†L119-L127】). TimeHero's strength is full “adaptive scheduling” – it shifts tasks if meetings appear. Its weaknesses: it feels dated and has a small user base (only 3.9/5 on App Store 【52†L82-L90】). It's best for small teams needing autonomy in scheduling without manual adjustments.

Clockwise (sunsetting)

Clockwise was a popular AI scheduling tool (acquired by Salesforce) that synchronized Google calendars to optimize focus time and avoid conflicts. It auto-moved events to give users protected Focus Time and flexible meeting slots 【15†L25-L34】 . By 2025 it had millions of hours saved and 40k organizations using it 【15†L25-L34】 . Key features included auto-scheduling 1:1s and team analytics. Clockwise supported Google Calendar and Slack. It had free and paid plans (for Workspace users). Strengths: strong AI scheduling, enterprise adoption; weaknesses: **service ended March 2026** 【15†L25-L34】 , so users must migrate (Reclaim pitched as replacement).

Other (Niche/Secondary)

- **Lindy (Lindy.ai)** – An AI email/meeting assistant (\$49.99/mo 【54†L185-L193】) that schedules meetings via email. It manages follow-ups and can integrate with apps, but is focused on email/calendar rather than task planning.

- **Scheduler.ai** – Similar to Lindy, it handles scheduling from email threads (about \$50/mo [\[54†L197-L204\]](#)).
- **Calendly** – A scheduling-link service (\$8–\$12/mo) for meetings. No AI beyond basic routing.
- **Focus Apps:** *Forest, Freedom, Focus@Will, Pomodoro Timer*, etc. (gamified focus or blocking tools). These help attention but lack AI scheduling.
- **Habit Apps:** *Fabulous, Habitica, Productive*, etc. (no AI scheduling; focus on daily routines).

Competitive Matrix

Competitor	Core AI Features	Scheduling	Focus Tools	Integrations	Platforms	Pricing	Target Users
Reclaim.ai	Auto-schedule tasks/habits, reschedule conflicts [8†L142-L150]	Schedules tasks, habits, meetings on calendar [8†L142-L150] [13†L187-L196]	Protects Focus Time; no-meeting days	Google/ Outlook Calendar, Slack, Asana, Todoist, ClickUp, Jira, Linear, etc. [8†L165-L167] [13†L187-L196]	Web (Calendar add-on)	Free (limited); \$10–15/u·mo [7†L278-L287] [13†L224-L233]	Professional teams
Trevor AI	Predicts task durations; AI chat (“Ask Trevor”) [2†L89-L98] [2†L139-L148]	Auto time-blocks tasks on calendar; Plan My Day	Focus Mode with timer and AI breakdown [2†L122-L131]	Todoist, Google/ Outlook Calendars, Google Tasks, MS To Do [2†L7-L15]	Web (mobile-friendly)	Free personal; \$5/u·mo Pro [4†L292-L300]	Individuals, freelancers
Motion	Auto time-blocking and re-planning [22†L1-L4]	Auto-schedules tasks & meetings from multiple calendars [22†L1-L4]	(None specific; schedules focus blocks via calendar slots)	Google/ Outlook/ iCloud Calendars [21†L405-L413]	Web, iOS, Mac	Paid subscription (not disclosed); ~\$19–49/mo [46†L203-L212]	Busy professionals, teams

Competitor	Core AI Features	Scheduling	Focus Tools	Integrations	Platforms	Pricing	Target Users
Todoist	"Smart Schedule" for overdue tasks (ML-based) 【34†L75-L83】	Time-block view; calendar sync	Karma productivity score; (no built-in timers)	Google Calendar, Slack, Alexa, etc. 【32†L212-L220】	Web, iOS, Android, desktop	Free; \$4+/u.mo Premium 【35†L9-L11】	Individuals, teams
Sunsama	AI auto-tagging and time estimates 【26†L35-L44】	Manual daily planning with guidance	Focus Mode, Break reminders (timers)	Asana, Trello, Jira, Notion, Slack, Teams, Google Tasks, etc. 【26†L80-L88】	Web, Mac/Win, iOS, Android	\$25/u.mo (\$20 annual) 【30†L317-L325】	Individuals, small teams
Akiflow	"Aki" AI assistant (chat)	Calendar tasks & events combined; one-click scheduling	Daily routines & time slots feature	Google/Outlook Calendars, Zapier/IFTTT, Gmail, Slack, etc. 【41†L165-L174】	Web (desktop app), Mobile	\$34/u.mo (\$19 annual) 【41†L25-L33】 【41†L77-L85】	Busy professionals, C-levels
Morgen	AI Planner (daily schedule recommendations)	Time-block tasks from imported todos; meeting booking	(No dedicated timer; can schedule tasks as focus blocks)	Google/Outlook/Apple Calendars; Todoist, Notion, ClickUp, Linear, etc. 【43†L65-L73】	Win, Mac, Linux, iOS, Android, Web	\$30/u.mo (\$15 annual); \$25/\$10 teams 【46†L62-L70】 【46†L100-L109】	Individuals, teams

Competitor	Core AI Features	Scheduling	Focus Tools	Integrations	Platforms	Pricing	Target U
TimeHero	Autonomous task scheduling	Automatically places tasks in calendar; adjusts to changes 【48†L82-L90】	(None; focuses on deadlines)	Google/ Outlook Calendars, Slack, Gmail, Asana, Zapier 【48†L82-L90】	Web, Mac, Win (iOS app)	\$5/\$4.6 u-mo Basic; \$12/\$10 Pro; \$27/\$22 Premium 【51†L53-L62】 【51†L119-L127】	SMB team remote teams
Clockwise	AI-driven event relocation (Sunsetting)	Auto-move meetings to optimize schedule	“Focus Time” blocks; Travel Time auto-blocking	Google Calendar, Slack	Web (Chrome extension)	Freemium (Enterprise pricing)	Knowledge work teams

Market Gaps & Opportunities

Our research shows **unmet needs** around simplicity, integration, and well-rounded focus tools. Many users find existing apps *too complex* and hard to customize 【73†L1-L9】. They often juggle several apps (calendar + to-do + focus timer) and want a single workspace 【71†L59-L62】. No leading product currently offers **AI-driven task scheduling plus embedded focus mode and habit-tracking** in one package. Pricing is another gap: most all-in-one tools charge ~\$20+/user-mo 【30†L317-L325】 【41†L25-L33】, leaving opportunity for competitive free or lower-cost tiers 【73†L13-L16】.

Feature differentiators: An AI app that seamlessly turns to-dos into calendar time (like Trevor) while also blocking distractions (Pomodoro timers or site-blocking) and nudging habits would stand out. Personalization (learning user preferences) and conversational AI could be a selling point – e.g. letting users ask “What should I work on next?” (like Lindy’s chatbot style).

Pricing/Monetization: Freemium entry (free basic scheduling), with premium for advanced AI and team features, aligns with successful competitors (Reclaim, Todoist). A one-time purchase or credits for AI usage could also be explored to reduce subscription fatigue 【73†L13-L16】.

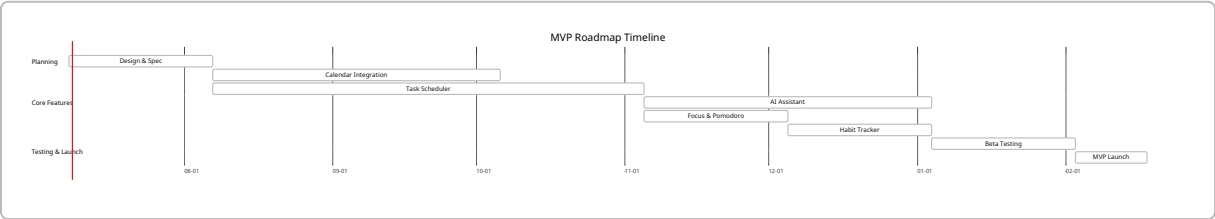

Go-to-Market: Target early adopters among remote workers and productivity enthusiasts via communities (e.g. Reddit r/productivity) and partnerships (calendar/task platforms). Highlight unique focus aids (timer, gamified streaks) and the AI “assistant” persona. Position as “your personal AI planner” for global users.

Recommended Feature Set

- **Smart Calendar Scheduling:** Core AI to suggest/auto-block time for tasks from to-do lists or emails (using duration estimates) [77†L99-L107] . Must handle conflicts and reschedule as needed (à la Reclaim [8†L142-L150]).
- **Integrated Task Management:** Unified task inbox pulling from external tools (Todoist, Asana, email). Allow manual entry and natural-language parsing (“Meeting with Bob tomorrow at 3pm”).
- **Focus & Pomodoro Mode:** A one-task-at-a-time mode with timer and white noise or break prompts, plus an optional site/app blocker during focus. Build on proven Pomodoro mechanics for productivity.
- **Habit Tracking & Reminders:** Ability to define daily/weekly habits (exercise, breaks) and automatically slot them into schedule or prompt check-ins. Leverage AI to adapt scheduling if habits are missed.
- **AI Chat Assistant:** Conversational interface to add or move tasks (“Reschedule my meeting to after lunch”), check agenda, and get summaries. Similar to Trevor’s “Ask Trevor” or Lindy’s chat.
- **Integrations:** Sync with Google and Outlook calendars (two-way), and popular task apps (Todoist, Google Tasks, etc.). Possibly integrate Slack/Teams to set status or parse tasks.
- **Cross-Platform UI:** Responsive web app plus mobile (iOS/Android) companion. Use intuitive calendar & list views. Avoid feature clutter: focus on 80/20 functionality (scheduling, focus, stats).

MVP Roadmap & Effort

Milestone	Description	Effort
Planning & Design	Requirements, UX/UI prototypes, tech setup	Medium
Calendar Integration	Sync Google/Outlook calendars; display events	High
Task Scheduling Engine	Develop AI-based task-to-calendar algorithm	High
Task Management UI	Build task inbox, drag/drop scheduling UI	Medium
AI Assistant Chat	Integrate GPT-4 API for natural language commands	High
Focus Mode & Timer	Implement Pomodoro timer and distraction blocker	Low
Habit Tracking Module	Allow setting recurring habits/reminders	Medium
Beta Testing & QA	User testing, refinements	Medium
Launch (MVP 1.0)	Deploy and gather user feedback	Medium

Tech Stack Suggestions: A modern web/mobile stack is recommended. For example, a React or Vue.js frontend and React Native (or Flutter) for mobile. Backend can be Node.js or Python (Flask/Django) with a PostgreSQL or Firebase database. For AI features, use OpenAI's GPT-4 (or a custom LLM) for scheduling advice and chat, and a lightweight ML model for duration prediction. Integrate calendar via OAuth (Google/Outlook APIs) and tasks via relevant APIs. Use a component library like FullCalendar for scheduling UI, and WebSocket or push notifications for real-time sync. The above roadmap accounts for integration complexity and AI development, with high effort on the smart scheduling core.

Next Steps: Implement core scheduling and calendar sync first (foundational MVP), then layer on AI assistance and focus/habit features in iterative releases. Prioritize a clean, uncluttered UI and a generous free tier to attract users frustrated with existing complex or costly tools [73†L1-L9] [73†L13-L16] .
